EXPERIENCE

CustEx, Remote, USA — Frontend Engineer

November 2022 - PRESENT

Technologies: HTML5, CSS3, JavaScript, TypeScript, React, NextJS, Redux, TailwindCSS, AWS Serverless

Worked as a part of a flexible team of frontend and backend engineers and had the following responsibilities:

- Implementing and constantly improving features for the SaaS web application working in a CI/CD pipeline.
- Communicating constantly and effectively with Project Management and UI/UX designers to discuss possible UX solutions and tradeoffs.
- Exploring and implementing solutions for optimizing performance and SEO for the application.

Freelance — Full-Stack Developer

August 2021 - November 2022

Technologies: HTML5, CSS3, JavaScript, TypeScript, React, NextJS, Redux, TailwindCSS, ChakraUI, MaterialUI, Node.js, MongoDB, Vercel

Worked on the design, development and delivery of multiple optimized, responsive solutions for clients from around the world

- **Alalamah Alkamla (The Full Mark):** A marketplace platform connecting students and teachers from elementary education to high-school education with multiple features including: multilingual content (arabic and english), multiple user types with different authorized roles and actions (admin, student, instructor, parent, instruction institution), an in-platform forum, a points system that can be charged by users to be able to access the platform's features (acts like the platform's currency). ([link](#))
- **Gifty:** An AI-Powered web application that allows users to add their loved ones to their network, then OpenAI's API generates queries that can be used to search optimal gifts suited to their relationship with the user, their gender, their occupation, their age and their interests. Then these queries are passed to an amazon scraping API to fetch products Users can purchase immediately or save them to access them later. ([link](#))
